

373617

To the National Highway Traffic Safety Administration, Department of Transportation

Docket number: 2005-22223 - 1795

DEPT. OF TRANSPORTATION

DOCKET

2005 NOV 22 A 11:38

I urge you to reduce oil consumption by increasing gas mileage standards for cars and light trucks to 40 miles per gallon, which would reduce oil consumption, save billions at the pump, and reduce global warming.

The most important action we can take to protect our environment and defend ourselves from future prices spikes is to use less gasoline in our cars and trucks. The current light truck proposal only harms consumers and the environment because it is such a paltry increase to miles per gallon standards, it allows for new loopholes so that manufactures can sidestep overall increases, and it counteracts state initiatives to clean up cars.

I also urge you to preserve states' rights to regulate vehicle emissions by removing language from your proposal that says federal law preempts states from doing more to increase gas mileage.

I understand my comments will be posted on a public website.

Sincerely,

J. Ackerman

Docket number: 2005-22223

Some of the major carmakers are reaping tremendous accolades from the press, public, and government for the production of a few hybrid vehicle models...but the fraction of new cars that earn high gas mileage scores remains sadly low. Raising CAFE standards will help protect the air for asthmatics like me, and will nudge the auto manufacturers to invest in the creation of affordable fuel-efficient and alternative-fuel technologies.

I urge you to reduce oil consumption by increasing gas mileage standards for cars and light trucks to at least 40 miles per gallon, which would reduce oil consumption, save billions of dollars at the pump, and reduce global climate change risks.

I understand my comments will be posted on a public website.

Docket number: 2005-22223

I urge you to reduce oil consumption by increasing gas mileage standards for cars and light trucks to 40 miles per gallon, which would reduce oil consumption, save billions at the pump, and reduce global warming.

The most important action we can take to protect our environment and defend ourselves from future price spikes is to use less gasoline in our cars and trucks, but the current light truck proposal is inadequate and even harmful to consumers and the environment because it allows manufacturers to sidestep overall efficiency requirements and counteracts state initiatives to clean up cars.

I also urge you to preserve states' rights to regulate vehicle emissions by removing language from your proposal that says federal law preempts states from doing more to increase gas mileage.
